Atheneum Coding Standard
Revision #1

Team Members:

Edwin Ramirez   edalrami@ucsc.edu
Nikola Panayotov   npanayot@ucsc.edu
Seth Little   sealittl@ucsc.edu
Cole Boyer   cboyer@ucsc.edu
Ian Hardy   ihardy@ucsc.edu

Syntax:

- Variables- Underscore, lowercase
- Methods- Underscore, first letter uppercase
- Named constants- Underscore, all caps
- Files- Underscore, lowercase
- Indent- Four spaces

Stylistically:

- For methods/ switches/ loops/ etc:

    ```
    Method_one(){

    }

    for(i = 0; i < n; i++) {

    }
    ```

- Add a brief explanatory comment for each method/ class/ file
- Write cohesively (group related functions, attempt to keep a logical flow in code)
- Write modularly with loose coupling in mind
- Declare variables near where they are used

Avoid:

- Undefined values (use named constants)
- Ambiguous variable names (flag, item, etc)
- Method duplication (either by superfluous or redundant methods)
